

# Plant Trees for Life!

Make a sustainable  
contribution to the protection  
of climate and species.

[WWW.GREENFORESTFUND.DE](http://WWW.GREENFORESTFUND.DE)

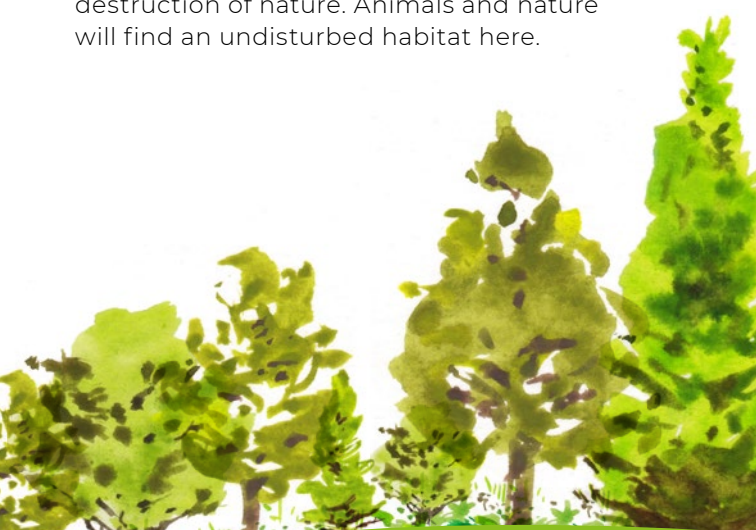

# We Create Tomorrow's Forests!

Planting trees means creating life.

We want to preserve the natural foundations of life for human beings, animals and plants – and make a contribution to the protection of the environment, to biodiversity and to CO<sub>2</sub> absorption to meet the Paris Agreement.

We help you become a helper.

We use your donations to plant and care for trees and vegetation. In addition, we acquire the plots to preserve the land for the unique beauty and diversity of nature on our planet. The areas where the trees are planted are located in Germany and we guarantee to protect them from investors or destruction of nature. Animals and nature will find an undisturbed habitat here.

## About the Green Forest Fund

The Green Forest Fund (GFF) is a young non-profit association with the aim to make a contribution to the protection of the climate and the domestic species. As an NGO based in Heidelberg, Germany, we create new and sustainable protected areas with various native tree species and colorful bee pastures – the Green Forest.

With Your  
Donation: Nature  
Will Be Grateful!

# Your Support Makes the Difference!

Climate and nature as a gift.

Whether for baptism, birthday, Christmas, anniversary or wedding: By giving a tree away as a gift, you do not only congratulate the recipient, but you also help the environment. And as a lasting souvenir, you will receive a beautifully designed certificate made from 100% recycled paper – including your individual tree number! So the recipient is able to find their tree at any time: on our specially acquired plots of land, where we guarantee lifelong growth.

Four trees compensate for your annual CO<sub>2</sub> emissions.

It all starts with you: Take action by planting a tree. Every tree absorbs about three tons of CO<sub>2</sub> over the course of 100 years. This is roughly equivalent to the amount that each of us produces in three months. So four trees planted each year will offset our average CO<sub>2</sub> footprint. Trees are one of the simplest and most effective means of addressing climate change.

## Make a contribution to the protection of nature!

You would like to support our mission? Become a sponsor. Your sponsorship is vital to our commitment to the protection of nature! Sponsoring members constitute our financial basis. Active support of our projects is not a requirement for a sponsorship.

### Our promises:

- ✿ We plant new forests as habitats for flora and fauna: intact ecosystems as “green lungs”
- ✿ We acquire plots to guarantee the lifelong growth of the trees – no deforestation
- ✿ We plant the trees in Germany – and look forward to your visit!
- ✿ We emphasize high transparency by indicating where each tree is planted
- ✿ We cooperate closely with nature conservation for the ideal design of ecosystems
- ✿ We plant and maintain bee pastures
- ✿ We want to contribute to the achievement of the Paris Agreement

# Yes, I Will!

Actions speak louder than words.

Our trees may grow as old as they can get. So they become natural forest ecosystems providing shelter to a variety of animal and plant species, improve the air we breathe, and fight climate change effectively.
