

# Create Tomorrow's Forests Today.

Make a sustainable contribution  
to the protection of the climate  
and species – and support us in  
tackling the climate crisis.

# We Create Tomorrow's Forests!

It is our mission to create tomorrow's forests. Trees are one of the simplest and most effective means of addressing climate change. Provided that these trees are allowed to grow to reach their natural age.

This is why we do not only plant new trees, but also preserve existing woodland areas. We transform these into forests where the trees are allowed to grow freely and without being disturbed. In this way, we want to preserve the natural foundations of life for humans, animals and plants – and contribute to nature conservation, biodiversity and CO<sub>2</sub> absorption to meet the Paris Agreement.

**With each forest donation you help the trees save the planet: We look forward to your contribution!**

## About the Green Forest Fund

The Green Forest Fund (GFF) is a young non-profit association with the aim to make a sustainable contribution to the protection of the climate and the domestic species. As an NGO based in Heidelberg, Germany, we acquire suitable plots on which we plant tree saplings. It is important to us that these trees can grow there for the rest of their lives! We also preserve existing woodland areas with old tree populations, which we convert into tomorrow's forests.

**We Need Your Support  
to Fight the Climate  
Crisis - Nature Will Be  
Grateful Too!**

# Become a Forest Donor: Your Support Makes the Difference!

It all starts with you: Take action. With your forest donation, you help us become helpers. We make choose existing woodland areas, purchase them and make sure that every single tree there can grow free and without being disturbed for as long as it wants to. This is how you can protect our native forests from logging and soil compaction – and create the tomorrow's forests, retreats for wildlife and vegetation.

**Make a contribution to the protection of nature!**

By making a donation, you preserve precious woodland area – and, depending on the size, even with a tree on it. On an area of about 10m<sup>2</sup> there is at least one tree, which may now become as old as it can get. With a donation of this size, you are effectively taking on a sponsorship – and you not only give life to this tree, but also help the environment.

## Stop commercial deforestation: our forests

We strengthen our woods. By protecting them instead of exploiting them. Whereas 98% of the woodland areas in Germany are used for forestry, our trees may grow as old as they can get. On our protected areas, the trees become part of a new pristine forest – right in the middle of Germany. That is how these woodland areas become sustainable climate forests of the future.

**This is our mission!**

### Our promises:

- ❖ **We acquire and preserve existing woodlands and turn them into areas for climate protection: tomorrow's forests**
- ❖ **We plant new forests as habitats for flora and fauna: intact ecosystems as "green lungs"**
- ❖ **We acquire plots to guarantee the lifelong growth of the trees – no deforestation**
- ❖ **We plant the trees in Germany – and look forward to your visit!**
- ❖ **We emphasize high transparency by indicating where each tree is planted**
- ❖ **We cooperate closely with nature conservation for the ideal design of ecosystems (e.g. bee pastures and hedges for birds)**
- ❖ **We want to contribute to the achievement of the Paris Agreement**

# Yes, I Will!

Actions speak louder than words.

By preserving woodland areas, we create natural forest ecosystems that provide habitats for a variety of animals and plants, improve our air quality, and effectively fight climate change. By supporting the Green Forest Fund e.V., you help the earth maintain its natural balance and continue to bring forth life.
